1. Five power supply connectors (banana jack), J11 (3.3 V), J13 (3.3 V), J16 (Vss- for amplifier), J20 (5 V), and J12 (GND) on the EVM are used to connect the EVM with offboard dc power supply. It provides supply voltage for all devices on the board. A few options for using supply pairs are shown in Table 1.

Texas Instruments new TCAN4550-Q1 Evaluation Module is a general purpose board to evaluate the TCAN4550-Q1 SPI to CAN FD controller with integrated transceiver in a wide variety of automotive and industrial applications. The supply voltage and CAN FD bus signals are available on an industry standard DB9 connector, allowing for easy integration into test fixtures and wiring harnesses.
