Quick Start Guide. This tutorial will walk you through the process of building a MINA based program. This tutorial will walk through building a time server.

### Quick Start Guide — Apache MINA

Chapter 1 - Getting Started. In this chapter, we will give you first sense of what is MINA, what is NIO, why we developed a framework on top of NIO and what you will find inside. We will also show you how to run a very simple example of a server run with MINA. 1.1 - NIO Overview

### Chapter 1 - Getting Started — Apache MINA

At this point, we will define the handler that will be used to service client connections and the requests for the current time. The handler class is a class that must implement the interface IoHandler.For almost all programs that use MINA, this becomes the workhorse of the program, as it services all incoming requests from the clients.

2.3 - Sample TCP Client. We have seen the Client Architecture. Lets explore a sample Client implementation. We shall use Sumup Client as a reference implementation.. We will remove boiler plate code and concentrate on the important constructs.

### 2.3 - Sample TCP Client — Apache MINA

A byte buffer used by MINA applications. This is a replacement for ByteBuffer. MINA does not use NIO ByteBuffer directly for two reasons: It doesn't provide useful getters and putters such as fill, get/putString, and get/putAsciiInt() . It is difficult to write variable-length data due to its fixed capacity
