Arduino Based Home Security **Project Hub**

A GSM based home security alarm system is designed using Arduino, PIR motion detection sensor and a GSM module. When the system is activated, it continuously checks for motion and when the motion is detected, it make a phone call to the owner.

Arduino

The security system comprises of an Arduino Uno microcontroller and a standard SIM900A based GSM/GPRS modem. The whole system can be powered from any 12VDC/2A power supply unit/battery. System diagram of the security system is shown here.

CONCLUSION Thus, we have designed a home security alarm system using Arduino and PIR motion sensor, which is handy, portable, cost-effective and highly effective as well. Such alarm systems are hugely in demand for security purposes, and thus the given system can be proved useful and effective in view of
