MATLAB-Based Electromagnetics is a self-contained textbook that can be used either as a supplement to any available electromagnetics text (e.g., [1]-[17] in the Bibliography) or as an independent resource.

MATLAB -Based Electromagnetics

MATLAB Exercises cover all important theoretical concepts, methodological procedures, and solution tools in electromagnetic fields and waves for undergraduates - in electrostatic fields, steady electric currents, magnetostatic fields, slowly time-varying (low-frequency) electromagnetic fields, rapidly time-varying (high-frequency) electromagnetic fields, uniform plane electromagnetic waves, transmission lines, waveguides and cavity resonators, and antennas and wireless communication systems.

RF propagation describes the behavior of electromagnetic radiation from a point of transmission as it travels through the surrounding environment. The analysis of RF propagation is essential in understanding how electromagnetic waves incur losses from a transmitter to a receiver in different scenarios.
