soft real time: same as the hard real time but an occasional miss can be affordable Predictability - In programming embedded systems, predictability usually means the predictability of the time it takes for certain operation. So, operations that are not guarantee a response within a given time, should not be used.

C++ Tutorial: Embedded Systems Programming - 2020

Many embedded systems can be characterized as real time. A real-time system is one in which the correctness of the computations not only depends on their logical correctness, but also on the time at which the result is produced. In other words, a late answer is a wrong answer.
