managing them using containers. It discusses architectural design and implementation approaches using .NET Core and Docker containers. Download PDF. Looking for the e-book in another format? View on the web

.NET microservices application architecture guidance

N-tier is a traditional architecture for enterprise applications. Dependencies are managed by dividing the application into layers that perform logical functions, such as presentation, business logic, and data access. A layer can only call into layers that sit below it. However, this horizontal layering can be a liability.

Architecture styles - Azure Application Architecture Guide ...

The Web-Queue-Worker architecture is typically implemented using managed compute services, either Azure App Service or Azure Cloud Services. Consider this architecture style for:
