Retinal Implants More than 50 years later, Labtician continues to introduce advancements in the field. In 1937, A. Jess (Germany) performed what may have been the first scleral buckling surgery using an explant when he used a gauze pad to temporarily indent the eye wall to approximate the retina with the choroid.

A new device called the Argus II retinal implant may help people with retinitis pigmentosa. The device is implanted inside a patient's eye during surgery. The implant, along with a tiny video camera in a set of special glasses, helps people to see again. This review looked at how well the Argus II system works, and how safe it is for patients.
