**COLD PROCESS:** Cold Process soapmaking is the act of mixing fixed oils (common oils include Olive, Coconut and Palm) with an alkali (Sodium Hydroxide or Lye). The result is a chemical process called saponification, where the composition of the oils change with the help of the lye to create a bar of soap.

### **BEGINNER'S GUIDE TO SOAPMAKING: COLD PROCESS - Soap Queen**

It's a liquid salt that helps harden cold process soap. Simply adding 1 teaspoon per pound of oils to your cooled lye water helps the soap release 1-2 days earlier. Sodium lactate can also be used in hot process soap to make it smooth and in lotion to draw moisture to the skin. We definitely recommend having it on hand.
