is aware of the “Seven Principles of Software Testing”. These fundamental testing principles help the testing teams to utilize their time and effort to make the testing process an effective one.

7 Principles of Software Testing: Defect Clustering and ...

Testing shows the presence of defects in the software. The goal of testing is to make the software fail. Sufficient testing reduces the presence of defects. In case testers are unable to find defects after repeated regression testing doesn't mean that the software is bug-free. Testing talks about the presence of defects and don't talk about the absence of defects.
