## **Solutions Inequalities**

Many simple inequalities can be solved by adding, subtracting, multiplying or dividing both sides until you are left with the variable on its own. But these things will change direction of the inequality: Multiplying or dividing both sides by a negative number Swapping left and right hand sides

Another commonly used, and arguably the most concise, method for describing inequalities and solutions to inequalities is called interval notation. With this convention, sets are built with parentheses or brackets, each having a distinct meaning. The solutions to  $x \geq 4$  are represented as  $[4, \infty)$ .

### **Describe Solutions to Inequalities | Intermediate Algebra**

In this unit, we learn how to solve linear equations and inequalities that contain a single variable. For example, we'll solve equations like  $2(x+3)=(4x-1)/2+7$  and inequalities like  $5x-2 \geq 2(x-1)$ . ## Inequalities

The word inequality simply means a mathematical expression in which the sides are not equal to each other. Basically, an inequality compares any two values, and show that one value is less than, greater than or equal to the value on the other side of the equation.

**Solving Rational Inequalities** The key approach in solving rational inequalities relies on finding the critical values of the rational expression which divide the number line into distinct open intervals. The critical values are simply the zeros of both the numerator and the denominator.

To solve an inequality use the following steps: Step 1 Eliminate fractions by multiplying all terms by the least common denominator of all fractions. Step 2 Simplify by combining like terms on each side of the inequality. Step 3 Add or subtract quantities to obtain the unknown on one side and the numbers on the other.

Section 9.3 After learning how to represent solutions to one-variable inequalities on a number line, students will study how to represent the solutions of two-variable inequalities on an x-y graph. Section 9.4 Students will apply what they know about systems of equations to help find the solutions to a system of inequalities.

The solutions to linear inequalities can be expressed several ways: using inequalities, using a graph, or using interval notation. The steps to solve linear inequalities are the same as linear equations, except if you multiply or divide by a negative when solving for the variable, you must reverse the inequality symbol.

A quadratic inequality is an equation of second degree that uses an inequality sign instead of an equal sign. The solutions to quadratic inequality always give the two roots. The nature of the roots may differ and can be determined by discriminant ( $b^2 - 4ac$ ). The general forms of the quadratic inequalities are:
