Free-Ebooks.net is a platform for independent authors who want to avoid the traditional publishing route. You won't find Dickens and Wilde in its archives; instead, there's a huge array of new fiction, non-fiction, and even audiobooks at your fingertips, in every genre you could wish for. There are many similar sites around, but Free-Ebooks.net is our favorite, with new books added every day.

What Is This Module About

A module is a software component or part of a program that contains one or more routines. One or more independently developed modules make up a program. An enterprise-level software application may contain several different modules, and each module serves unique and separate business operations.

What is a Module? - Definition from Techopedia

Read Online What Is This Module About Eskwela Naga City

1. When referring to computer software, a module is a discrete piece of code which can be independently created and maintained to be used in different systems. For example, a developer may create a module that contains the code required to use a sound card or perform I/O on a certain type of filesystem. The module can then be distributed for and used by any system that needs that functionality, and development of the module can proceed independently.

What is a Module? - Computer Hope

Module, in connection with modular decomposition of a graph, a kind of generalisation of graph components. Modularity (networks), a benefit function that measures the quality of a division of a Complex network into communities.

Module - Wikipedia

designed to perform a particular task: the spacecraft's command module; a lunar module. a standard or unit for measuring. a selected unit of measure, ranging in size from a few inches to several feet, used as a basis for the planning and standardization of building materials.

Module | Definition of Module at Dictionary.com

An even better solution is to import each module's features inside a module object. The following syntax form does that: `import * as Module from './modules/module.js'`; This grabs all the exports available inside `module.js`, and makes them available as members of an object `Module`, effectively giving it its own namespace. So for example:
