Wheel Alignment Manual

There are three main aspects to wheel alignment: camber, caster, and toe. By attaching special laser measuring equipment to the wheels it is possible to read the angles of these. Adjustments can then be made to the car's suspension and steering geometry, and with the laser alignment equipment still attached to the car, continue to be made until the settings are back to the factory specification, or other setting.

In theory, all four wheels should be perpendicular to the ground and parallel to each other. When the vehicle starts pulling to one side – or after a sharp impact with a curb – most drivers suspect that the wheels might be out of alignment. Irregular tire wear, vibration and odd handling characteristics are other clues.
